

8100DT

DIRECT DRIVE DRAPERY TACKER

Sewing a 3/4" drapery pleat has been virtually impossible with all but the lightest fabrics until now. We've modified the head and introduced direct drive technology and the ability to set the torque and speed required to tack heavy fabrics.

For tacking all types of drapery work, the 8100DT with direct drive technology allows you to set the speed of the machine and the stitch count, offering the whole package. A quieter, precise sewing experience and outstanding build quality.

SPECIFICATIONS

ELECTRICAL	110V/120V / 60hz	
MAXIMUM SEWING SPEED	1445 RPM
